

Module # 2: Product Interaction Design

Double Diamond

Discover

Organizing and time management are some skills that I'm really proud of. Every Monday, I make it a point to plot my schedule for the whole week and make sure that I will be ahead of my deadlines. I always write my schedule on my planner and set an alarm on my phone calendar so that I could easily get notified when I have a task to be done. I am used to setting my schedule on my mobile phone because it's the first thing that I check every morning and I'm holding it everywhere I go. But now that I'm always at home, I always have a hard time focusing. There are times that I will look at my phone calendar to check or update my tasks but I end up checking my social media accounts. Little did I know, I've been using it for more than 30 minutes which leads me out of track.

Define

Using a mobile application can help the user keep track of their schedule. It can help monitor tasks that are not yet accomplished, to be approved, on-going, and canceled. Since it is a mobile application, there are possible distractions while using it. Users should be able to block applications that may cause distractions. If there is a task scheduled to be accomplished at a certain time, applications that are blocked may not be used as a way to focus on the task at hand. When users need to access the applications for emergency purposes, a code will be requested. The code/permission will be sent to another person or the emergency logged person so that the user may access the application needed. The user can unlock the application for a maximum of 5 times. After that, the user cannot unlock the application on their own. They would have to contact their emergency person.

Develop

Focus Planner is an application that helps you plan your tasks and monitor your progress. It can also block applications that may be a hindrance in performing the user's scheduled tasks.

Reflection

The first thing I did was to assess myself. I thought of something that I badly need and something that would benefit me. When I thought of the *"Focus Planner"*, I listed all the problems I've been encountering while performing my tasks in school. I assessed myself if ever there is an application that is like that would I use it? Yes, I would definitely use it. It won't just help me schedule or plan my day, it will also help me focus on the tasks that I have to accomplish. I've used a lot of scheduling applications, I admit that all are good and very user-friendly but still I need an application that would help me focus. There are applications that can help in focusing such as Forest: Stay focused. With this application, you will be able to plant a tree and stay focus at the same time. If you close the application then the tree will be put into waste. That's how decided to make an application wherein I can block applications while I do my tasks to avoid distractions.
